Declaration of intent with Pakistan

Qnective: Main solution provider for “Safe City” project in Pakistan

Zurich, 11 May 2016 – **Qnective and its partner Motorola Solutions Inc. have jointly signed a Memorandum of Understanding with the government of Pakistan to deliver a “Safe City” solution for the city of Karachi in the province of Sindh. “Safe City” is a security measure aimed at protecting the lives and property of residents in the aforementioned city and at contributing effectively and efficiently to the combating of criminal and/or terrorist activities there. Together with Motorola Solutions Inc., Qnective will act as the main solution provider for the USD 430 to 450 million project.**

The agreement was signed on Friday 15 April 2016 by Qnective, Motorola Solutions Inc. and Abdul Rahim Shaikh, Secretary-General of the Ministry of Information, Science and Technology in Karachi, Pakistan. It is planned to draw up a detailed framework contract in the next three months, with financial issues taken into account, and to jointly sign this, so that the project can be started immediately afterwards.

Qnective and Motorola Solutions Inc. will develop the technical plans and thus the basis for the “Safe City” project, and will implement the corresponding solutions. The technical requirements concerning e.g. the ICT infrastructure and the services to be selected will be determined and developed in the process. To ensure that security extends to all areas, the use of various technologies beside end-to-end encryption systems (core competence) is planned, such as: video surveillance systems, radio communication and dispatching systems, emergency systems, video conference services, lawful interception systems, unified communication services, emergency communication vehicles and intelligent transport systems.

There are currently no comparable projects in Pakistan, but further such projects in other cities will follow.

About Qnective

Qnective is a leading provider of sophisticated communication solutions and services, with deep expertise in wireless technologies, networking, infrastructure and highly-secure encryption mechanisms. Founded in 2007 and based in Zurich (Switzerland) with offices in Muscat (Oman), Singapore, Jakarta (Indonesia) and Lugano (Switzerland), Qnective provides governments, public safety organisations and large companies with secure mobile communications. It has a proprietary communications platform that was developed in Switzerland and encrypts telephony, messaging and data exchange with the highest level of security. www.qnective.com
