

Press release

Positive half-year figures

Qnective: secure mobile communication on the rise

Zurich, 30th September 2013 – **Qnective has had a successful first half of 2013. The company for tap-proof communication solutions has doubled its forecast revenues. The current discussions about data protection and privacy resulted in numerous requests for secure communication products. The outlook for the current half year is positive too: several companies from Switzerland and abroad are testing Qnective solutions. Furthermore, the local Indonesian partner PT Neural Technologies announced his order of Qtalk Secure as encrypted communication solution for their management team.**

One of the sister companies of Smarthub Technologies, PT Neural Technologies (NTI), is offering Qnective products for eavesdropping secure voice calls and encrypted data exchange as an IT reseller service in Indonesia. Smarthub is specialized in software solutions for governments, the telecom industry and medical healthcare. Clients of the 2002 founded company include big hospitals as well as international companies with a hub in Indonesia like PT Telkomsel (the largest mobile operator in Indonesia), or the National Cardiovascular Center Harapan Kita hospital (Rumah sakit Jantung dan pembuluh darah Harapan Kita). The order of NTI shows the commitment of the local partner: The entire management team will be securing their calls with Qtalk Secure. The advantage of this software solution is its easy deployment on common smartphones, so that no investments in hardware are necessary.

Positive outlook for the current fiscal year

Thanks to the high attention being paid to recent news about eavesdropping scandals, economic espionage and data privacy, the demand for encrypted communication service has raised significantly. Current tests with major companies and governmental organisations will probably have a positive influence on the business development of the second half year. Regarding future developments in the field of cryptography and to be ahead of market trends, Qnective's Ioannis Ioannidis has been appointed Head of Innovation. Software developer Eric Sauser was promoted to the Management team as Director of Development and Technical Operations. He will be leading a team of security experts and software specialists for the further enhancement of Qnective's B2B and B2C products.

About Qnective

Qnective (<http://www.qnective.com/>) was founded in Switzerland in 2007. The company is headquartered in Zurich. Qnective offers services for secure communications, developing individually designed platforms for governments, military organisations and large-scale enterprises. Qnective delivers tailor-made solutions covering the design, development and deployment of secure communication projects around the world. The company maintains its own, proprietary, encrypted communications platform, „made in Switzerland“, for secure GSM telephony and data transmission.
