Cooperation agreement

Qnective and Swisscom: Secure communications products for businesses

Zurich, November 11th, 2015 – **In the future, the Swiss encryption experts of Qnective will work together with the largest Swiss provider of telecommunications. In this partnership, Swisscom will offer the secure communications platform Qtalk Secure to their corporate clients. Together, further offers for large and small companies will be launched. With Qtalk Secure, regular Smartphones will be converted into tap-proof communications channels, using encryption from terminal to terminal. The platform secures sensitive information, which is transferred via telephone, SMS, chat or as files, against industrial espionage.**

The cooperation between Swisscom and Qnective has already begun. The focus is on enterprise customers from the pharmaceutical, financial and insurance industries. Special offers are designed to provide added value for the customers of Swisscom when it comes to security and encryption. "We are pleased that after successes in South America, Asia and the Middle East, we now have a strong partner in our home market Switzerland. With Swisscom as a leading ICT provider, we can build on a professional network of specialists and offer our product to a wider group of customers," says Michael Ortiz, Head of Sales at Qnective. The platform Qtalk Secure complements the existing products of Swisscom with a deceptively simple encryption application. With this continuous encryption from terminal to terminal, companies can exchange highly confidential data much easier - without a separate device, a separate chip card or other hardware.
