

Press release

Qnective teams up with WIS@Key to integrate their technology of the Security Solution QTALK into WIS@Key's mobile security solutions, WISEid and WISEphone

Zurich, 6 June 2018 – The Swiss company Qnective, leading provider of sophisticated communication solutions and services, today announced its partnership with WIS@Key International Holding Ltd ("WIS@Key", SIX: WIHN, OTCQX: WIKYY), a leading cybersecurity and IoT company. The aim of this partnership is to integrate its Qtalk technology for mobile encrypted voice and text, into WISEid and WISEPhone expanding the WIS@Key's offering to enterprises that will benefit from secure telephony, instant messaging and SMS with sophisticated security mechanisms and advanced end-to-end encryption technologies. Integrating within the existing IT infrastructure seamlessly, Qtalk is fully compatible with BYOD strategies.

The Qtalk software-only solution is a cost-effective and flexible platform that empowers efficiency and mobility within the organization whilst protecting the intellectual property and the confidentiality of the communications by transforming public networks and mobile devices into highly secure communication channels.

WIS@Key has attained Telecommunication Services Provider status under OFCOM, the Swiss Federal Office of Communications, allowing the company to deploy its mobile phone voice encryption solution, named formerly WISEPhone. WIS@Key launched WISEPhone for Blackberry, iPhone, and Android, during the 2011 ITU Telecom World, as a solution simple to use and extremely secure. WISEPhone technology works with a variety of widely-used smartphones currently operating in today's mobile environment, so there is no need to buy a special phone. Communications are secured with military-grade encryption, offering the same level of security used to protect government communications and financial transactions.

This new evolution of the solution will be named WISETalk Secure, a combination of Qnective's QTalk and WIS@Key's WISEid mobile security suite, enhances user experience thanks to the WIS@Key QuoVadis worldwide trusted digital identity solutions and encrypted personal cloud offerings. WISETalk will come preinstalled in the new secure smartphone that WIS@Key will release in partnership with Highscreen, as recently announced (https://www.wisekey.com/investors_press-release/wisekey-partners-with-highscreen-international-sa-to-develop-wisephone-the-first-ever-secure-blockchain-phone-with-cryptocurrency-payment-capabilities/). This new smartphone will be released under the WISEPhone brand.

"With the combination of WISEPhone and Qtalk, people can be assured that their conversation is protected from prying ears, thanks to the high level of cryptography used. WIS@Key uses its globally recognized digital security pedigree to make communications safe," said Carlos Moreira, WIS@Key CEO.
